Solder Fume Extraction

Is Your Company Covered?

Why be concerned about soldering fumes and gases?

Because they are dangerous to human health!

The fact is that dangerous smoke and fumes in the workplace result in reduced productivity within the company.

Fumes produced when soldering can contain many substances including formaldehyde. This can contribute to occupational asthma and bronchitis, symptoms of which may include breathlessness, hoarseness and severe coughing.

Harmful gases and solder fumes can now quickly and easily be extracted before they have a chance to be inhaled or get into the atmosphere. Suba's solder fume extractors make the air safe to breathe. The dangerous fumes are removed directly at the source. The fumes are then filtered and cleaned. The filtered air can be recirculated back into the workplace.

For all your fume extraction requirements

Suba Engineering has the solutions.
