

# Solder Fume Extraction Is Your Company Covered?

Why be concerned about soldering fumes and gases?  
Because they are dangerous to your health!

The fact is that dangerous smoke and fumes in the workplace result in reduced productivity within the company. Fumes produced when soldering can contain many substances including formaldehyde. This can contribute to occupational asthma and bronchitis, symptoms of which may include breathlessness, hoarseness and severe coughing.

Harmful gases and solder fumes can now quickly and easily be extracted before they have a chance to be inhaled or get into the atmosphere. Suba solder fume extractors make the air safe to breathe. The dangerous fumes are removed directly at the source. The fumes are then filtered and cleaned. The filtered air can be recirculated back into the workplace. Protect your staff, working environment and valuable equipment with quality products from Suba

For all your fume  
extraction  
requirements

**suba**  
ENGINEERING

has the solutions.

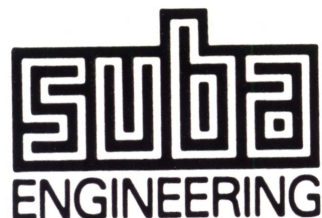

## SUBA TFE system

- 1 person benchtop soldering fume extractor
- Easy to install and simple to maintain
- Connects to standard Electrical power point
- Long life filter system, 2 stage filter system
- Affordable unit and low operating cost

## SUBA FUME EXTRACTOR

- 2 station soldering fume extractor
- Easy to install and simple to maintain
- Long life filter system, 3 stage filter system
- Large pre-filter
- Affordable unit and low operating cost
